CTRL Releases New Product For Integrating Ultrasound Solutions

CTRL Systems Inc. (WESTMINSTER, Maryland) - CTRL Systems is pleased to announce the new web based application **InCTRL** that combines CTRL's existing ultrasound technology and data collection products with data management and analysis for a complete turnkey solution.

InCTRL provides access through the Web to CTRL UL101 and SoundCTRL data gathered by maintenance personnel during routine inspections of critical equipment. **InCTRL** systems and data are maintained and secured by CTRL so the user does not have to worry about installation, upgrades, backups, or overall operating expenses. The information provided through reporting and analysis helps organizations improve control over day-to-day operations, establish corporate standards and calls to action, and develop better maintenance and operations practices.

CTRL products are delivered through turnkey integration programs that incorporate training, documentation, milestones, benchmarking, and support. The new management and reporting system helps to achieve results faster and share information throughout the entire organization for the benefit of energy savings, quality control, production uptime, and improved asset life cycles.

"**InCTRL** is the glue that binds everything together," said Robert Roche, President of CTRL Systems, Inc. "Upper management and technicians will now have access to critical data from anywhere in the world. This new system provides a means of developing and tracking corporate standards as well as ensuring that investment in predictive technology is exercised accordingly for the desired results."

CTRL Systems, Inc. is a leading developer and manufacturer of non-destructive, predictive/preventive maintenance technology including ultrasonic inspection devices and maintenance management software. The company provides cost-saving solutions to engineering, operations, safety, quality control, and maintenance departments in several industries - including aerospace, aviation, health, petrochemical, pulp and paper, railroad, automotive, manufacturing, and the military. CTRL's growing reputation among these industries is built on its commitment to quality, and the company's philosophy of developing long-term relationships with its customers in order to better meet their specific needs. CTRL Systems stands firmly dedicated to the advancement of new technologies that promote the effectiveness of reliability and maintenance programs.

More information about CTRL Systems products and services is available at www.ctrlsys.com or contact CTRL service centers directly in USA, China, and South America.
