CTRL Systems to build products for Sonatest NDE PLC

CTRL Systems, Inc. (WESTMINSTER, Maryland) – CTRL Systems announced today that Sonatest NDE PLC (MILTON KEYNES, England) has opened a multi-year contract for CTRL to build a range of its ultrasonic products under the Sonatest brand.

“We are pleased that Sonatest, a leader in NDT, has selected CTRL as a partner to expand awareness and provide greater integration of this technology into all industries,” stated Bob Roche, CEO of CTRL Systems.

Sonatest will add these new products to its already existing family of Non-Destructive Testing (NDT) products. These products will add another dimension to the full comprehensive range of NDT products offered by the Sonatest network of over 200 distributors worldwide. Additionally, both companies look forward to new offerings from the collaboration of the two R & D teams.

"Sonatest NDE is excited to enter the ultrasonic leak detection and condition monitoring market on a global basis. We are impressed by the CTRL technology and believe the product range will prove highly complimentary to our existing ultrasonic NDE lines. Most importantly, it is another big step in offering our customers the world's best range of NDE / condition monitoring instrumentation," stated Mike Reilly, Group Managing Director of Sonatest NDE.

CTRL Systems, Inc. designs and manufactures a line of handheld non-destructive testing devices and data capture systems that use the properties of ultrasound to provide a quick and accurate method for testing the condition of components such as bearings, gears, gas lines, pumps, non-pressurized & pressurized vessels. These products are an integral part of CTRL's complete turnkey system, in use by the aerospace (NASA ISS), aviation, petrochemical, pulp & paper, railroad, automotive, manufacturing, and power generation industries, as well as the US military air, land and sea operations.

Sonatest NDE PLC offers a full range of products including Flaw Detectors from Sonatest Ltd, X-Ray Equipment from Balteau NDT, Thickness Gauges from Dakota Ultrasonics, Ultrasonic Phased Array Instruments from HARFANG and Advanced NDT Instruments & Systems from NDT Solutions.
